QUANTINOX

ERP buyer’s checklist

40 questions to ask before you choose an ERP

How to use it: score each vendor 0–2 per question (0 = no, 1 = partly, 2 = yes, shown in a demo). Compare totals per section, not just overall.

1. Business fit

		Vendor A	Vendor B	Vendor C
1	Does it cover our core processes out of the box: finance, sales, purchasing, inventory and payroll?			
2	Are best-practice processes for our industry included, or built from scratch?			
3	Can it handle our number of companies, plants, warehouses and currencies?			
4	Does it handle GST, e-invoicing, e-way bills and TDS for India?			
5	Can it support our other countries’ tax and reporting if we expand?			
6	How are approvals and workflows configured, and by whom?			
7	Can it run make-to-order, projects or subscriptions if we need them?			
8	What reports and dashboards come ready to use?			
9	Can users work in Hindi and other languages we need?			
10	Is there a mobile app for approvals, stock checks and expenses?			

2. Technology and AI

		Vendor A	Vendor B	Vendor C
11	Is it true cloud (multi-tenant SaaS) or hosted software?			
12	How often are updates released, and do they break our changes?			
13	Are there documented open APIs for every business object?			
14	Which connectors exist for our bank, e-commerce, CRM and payroll tools?			

		Vendor A	Vendor B	Vendor C
15	Can we extend it with low-code tools without changing the core?			
16	What AI is built in today, and what is only on the roadmap?			
17	Can AI actions be limited, approved by a person and audited?			
18	Where is our data stored, and can we choose the region?			
19	How are security, backups and disaster recovery handled?			
20	Which certifications and audits can the vendor show proof of?			

3. Total cost

		Vendor A	Vendor B	Vendor C
21	What is the price per user, and which user types exist?			
22	What is included in the subscription, and what costs extra?			
23	How much will implementation cost, and is it fixed or time-based?			
24	What does data migration from our current system cost?			
25	Are training, support and sandboxes included?			
26	How are AI usage, storage and API calls billed?			
27	What price increases are allowed at renewal?			
28	What internal team time will the project need?			
29	What will we stop paying for (old licences, servers, tools)?			
30	What is the realistic payback period, using our own numbers?			

4. Vendor and partner

		Vendor A	Vendor B	Vendor C
31	Can we speak to two customers like us, in our industry and size?			
32	Who implements: the vendor, a partner, or both? Are they certified?			
33	What does the implementation plan look like, week by week?			
34	What are the support hours and response targets by priority?			
35	Is there a named success or account manager?			
36	How healthy is the vendor, and what is its product roadmap?			
37	What happens to our data if we leave? In what format do we get it?			
38	What are the contract length, notice period and exit terms?			
39	Is there a user community, training and certification?			
40	What does the vendor commit to in writing (service levels, uptime)?
